Structural Integrity Associates, in collaboration with the Northeast Gas Association (NGA) and Southern Gas Association (SGA), has developed a DIMP plan template (with supporting User Guide) that is easily modified and adopted for gas distribution companies. This plan framework addresses all major elements of the new regulation.

WHY PURCHASE THIS PLAN?

Unlike other simpler, on-line based programs, the NGA/SGA plan authored by Structural Integrity Associates was designed from the start to handle a complete program not just a “starting point”. In addition, a software solution and supporting engineering services are available to assist evaluating and ranking risks, leading to an immediate ROI realized through manpower savings in customization, implementation, and periodic evaluation.

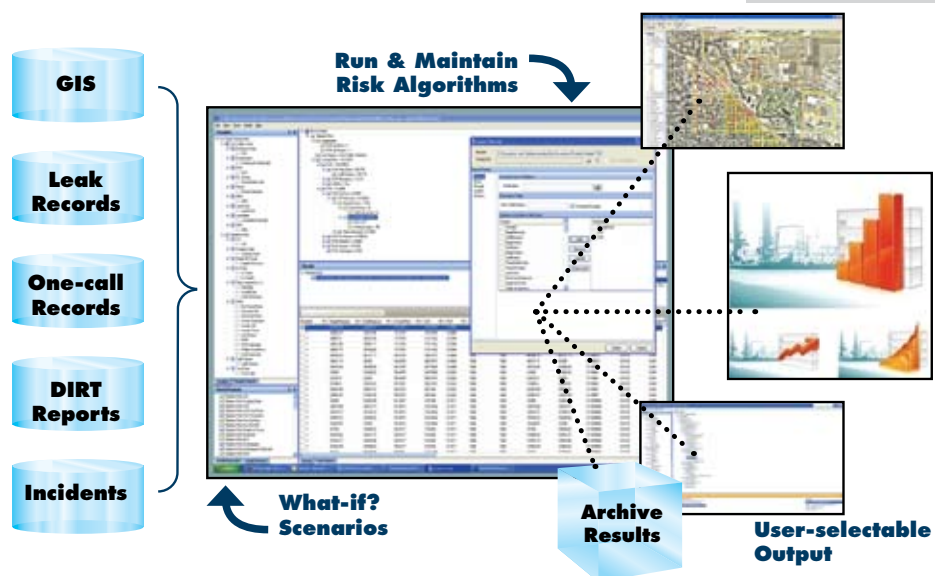

HOW IS THIS PLAN OPTIMIZED FOR YOUR SYSTEM?

The NGA/SGA DIMP plan is thorough and can be easily customized by following the accompanying User Guide.

INCLUDED IN THIS PACKAGE IS:

- An outline and review of all key relevant data records
- A review and evaluation of over 50 existing and potential threats
- Data Centric and SME based tools for Threat Identification
- Different risk models taking into account both quantitative data and an SME based approach
- A list of recommended mitigating measures to address different threats

*More than 47 Companies
representing over 40%
of all gas services
are using this DIMP plan
template and user guide.*
